課題A

One morning Henry was playing around the house. It was a nice day. He jumped, and ran. He was happy. Then he stopped and said, "Can we see the light with our eyes? Or can we see it with our mouths?" He closed his eyes and opened his mouth. Then he closed his mouth and opened his eyes. He did it again. Eyes can see but mouths can not see. He found something out.

He ran back to his house and said to his father, "Dad, I found something out!" "What did you find out, my boy?" said his father. "We see with our eyes, but we don't see with our mouths," said Henry. "(1)What a funny boy you are! You did not find it out. We all know that," said his father. "But I found it out," said Henry.

He loved nature and learned much from it. Nature was his friend and teacher.

He often went to the fields and watched birds and insects. He asked many questions. "How does a bird make its house? Do all insects sing?" He was curious about everything. His family was poor and he could not buy books. But in school he studied hard. When he was only nineteen, he became a teacher of science.

His interest in insects became strong. He sat for hours and watched a long line of ants or a hive(*) of bees. (2)He asked questions all his life. After he studied insects for many years, he wrote books about them. And he became very famous.

hive(*) : (蜂の) 巣
